DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figures 8 and 9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

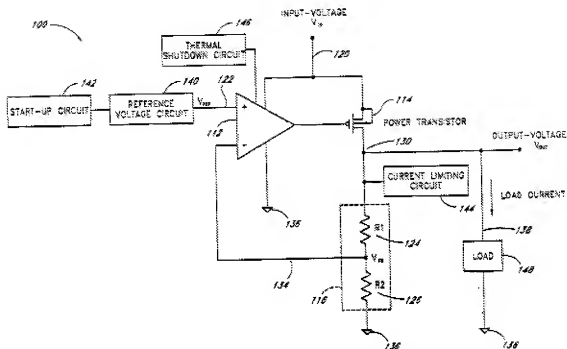

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Zadeh (USPAP 2002/0130646). Zadeh discloses a voltage generating circuit (100), a control circuit (112). See also paragraph 38.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 5-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zadeh (USPAP 2002/0130646) in view of Heisley et al. (USP 6,333,623).

Zadeh discloses the claimed invention except for a biased MOS transistor connected between the drain of another MOS transistor and ground. Heisley discloses that it is known in the art to provide a biased MOS transistor connected between the drain of another MOS transistor and ground. It would have been obvious to one having ordinary skill in the art at the time of the

invention was made to provide the linear voltage regulator of Zadeh with a biased MOS transistor connected between the drain of another MOS transistor and ground of Heisley, in order to provide a voltage regulator that overcomes the problem of instability as low output currents.
